Many years of experience in the printing business in The Netherlands, creating bespoke products for clients that I built long lasting working relationships with. Developing ideas with the client and designing and producing material for print and web with my team were rewarding, enjoyable and gave me priceless experience. After moving to Ireland with my family in 2016 I started working for a multinational as a linguistic data analyst/modeler in AI/ML within an international team. This gives me the confidence that after my recent graduation from the Code Institute and getting a level 6 diploma in **Full Stack Software Development** I can again successfully evolve into a role that may require many of the qualities I have developed.
